**FOR IMMEDIATE RELEASE**

“No Programming” Temperature Monitoring Solution for PCI Computers Includes A/D, Signal Conditioning, Thermocouples, Cabling and Software

SAN DIEGO, CA - November 2, 2001 - ACCES I/O Products introduces the PCI-AI12-16A-TM Series of “turnkey” temperature monitoring solutions for PCI bus computers. Available in 16- and 32-channel versions, the series requires no programming whatsoever and includes all of the hardware and software elements for a complete, full-featured, out-of-the-box temperature monitoring solution.

Setup and installation are quick and easy with the PCI-AI12-16A-TM series. Users need only install the A/D card, connect the ribbon cable, signal conditioner and thermocouples, and the package is ready to go. Sampling speeds are selectable from 50 times per channel per second to once per channel every 5 seconds.

The PCI-AI12-16A-TM series system package (with onboard cold-junction compensation) includes:

- PCI-AI12-16A analog-to-digital card with on-board pacer clock and counter timer, software-enabled interrupt capability, and four discrete TTL-level digital input or output ports;
- 16 (Model -TM16-TC) or 32 (Model -TM32-TC) type K thermocouples and 20' fiberglass extension cables (other thermocouple types are supported, consult factory);
- AIM-16P 16-channel analog multiplexer and signal conditioning card
- Ribbon cable;
- Windows 32-Bit application software that displays data as its collected, then logs it to a .CSV file for opening in Microsoft Excel or other spreadsheet program.

The PCI-AI12-16A-TM Series package is rugged enough for use in harsh industrial environments of 0-60C and 0-90% relative humidity (non-condensing). Systems are also available with no thermocouples as models PCI-AI12-16A-TM16, ($1129) and PCI-AI12-16A-TM32 ($1618).

Price: $3129 (PCI-AI12-16A-TM16-TC); includes documentation and software
$4618 (PCI-AI12-16A-TM32-TC); includes documentation and software

Availability: Now
Delivery: 4-6 weeks ARO, depending on thermocouple type
